Visualization

1. For the time lapse animation of resistivity images

Click on "Visualization" in the primary menu and then click on "resistivity". A file box will appear showing all resistivity images from the user's saved picture folder.

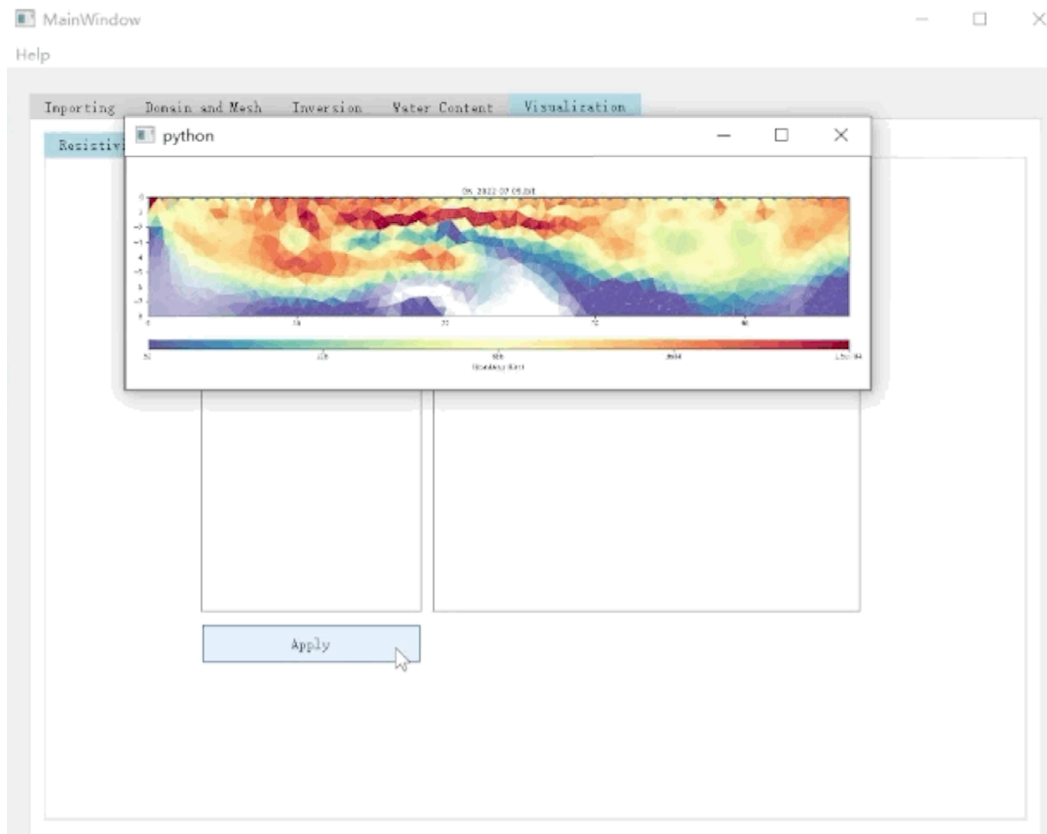

After selecting multiple resistivity images of interest, click "Apply".

The program will generate a time lapse animation, pop up a window to play the animation, and automatically save the animation GIF file with the creation time as the file name.
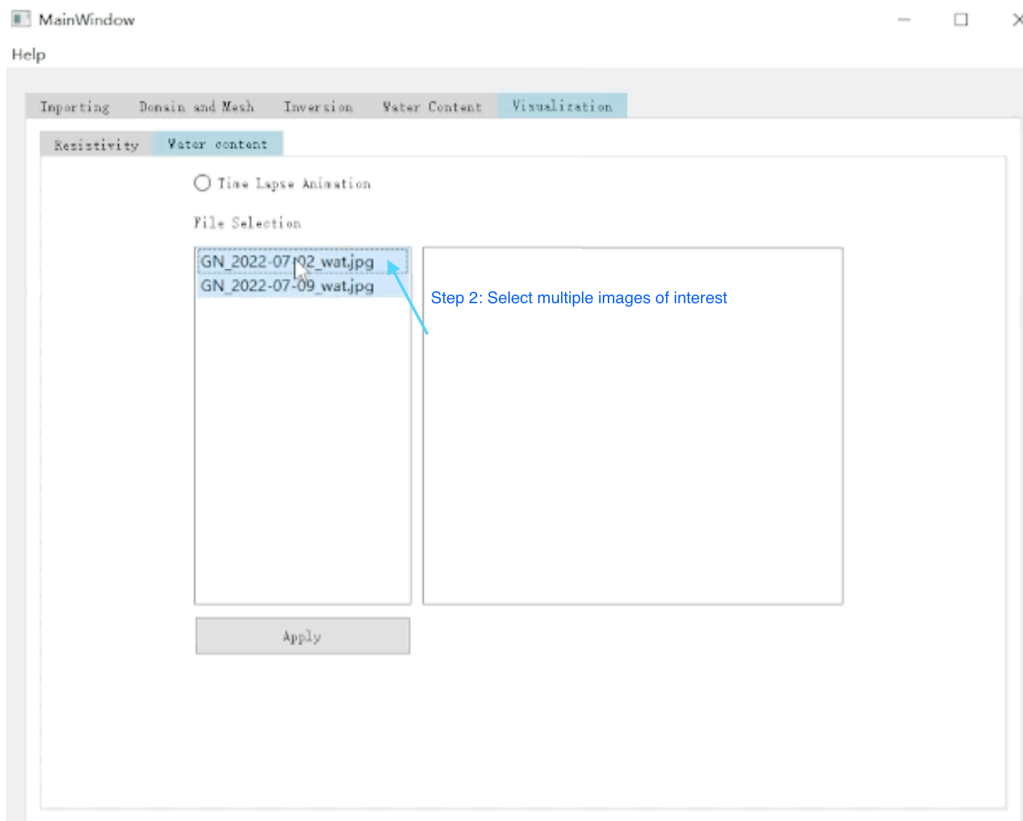

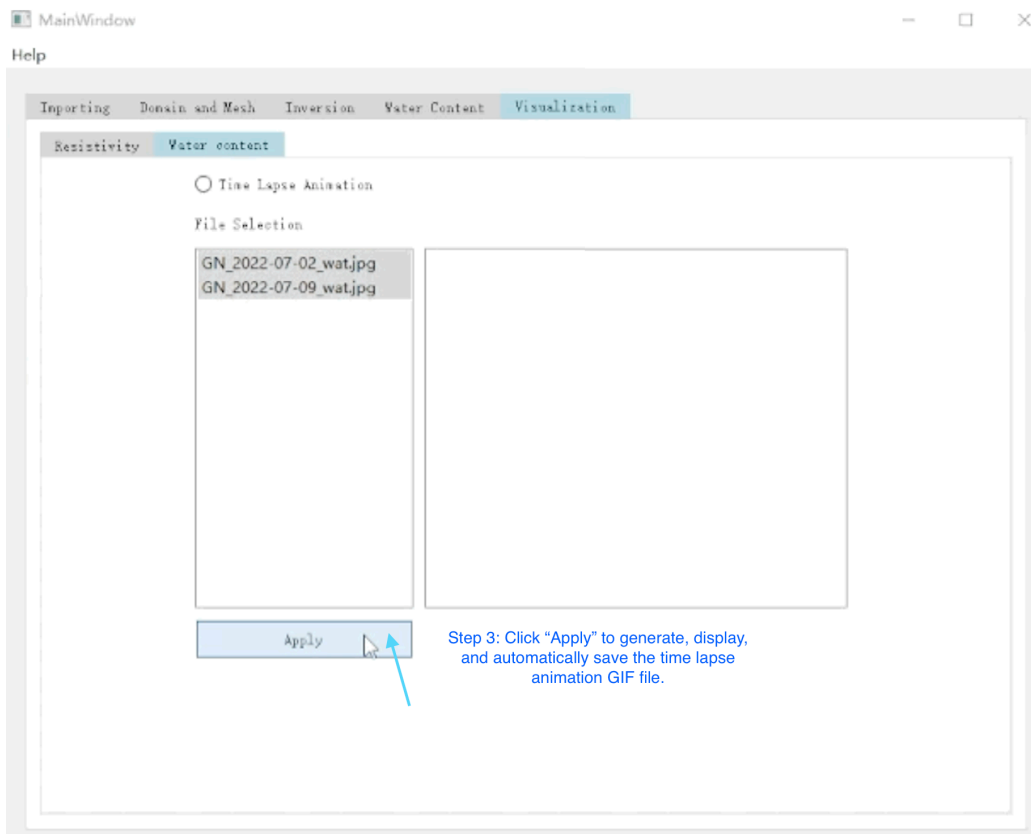

2. For the time lapse animation of resistivity images

If you need a water content animation, click on "water content". A file box will appear showing all water content images from the user's saved picture folder.

After selecting multiple water content images of interest, click "Apply".

Step 3: Click "Apply" to generate, display, and automatically save the time lapse animation GIF file.

The program will generate a time lapse animation, pop up a window to play the animation, and automatically save the animation GIF file with the creation time as the file name.
